Introducing the World's First Thermally Broken Steel Window & Door System

The times change, certainty remains.

With great respect for the past, we look into the future to satisfy the needs of today's ever changing technological world.

STAINLESS STEEL

Clean, precise, impervious, stainless steel with its structural qualities is the perfect choice to define large spaces. With either a satin or polished finish, it conveys a modern and highly technological interpretation of today's way of life.

STAINLESS STEEL

The corrosion resistance and structural stability of stainless steel give an everlasting appearance. An excellent choice for coastal applications and highly corrosive environments.

BRONZE

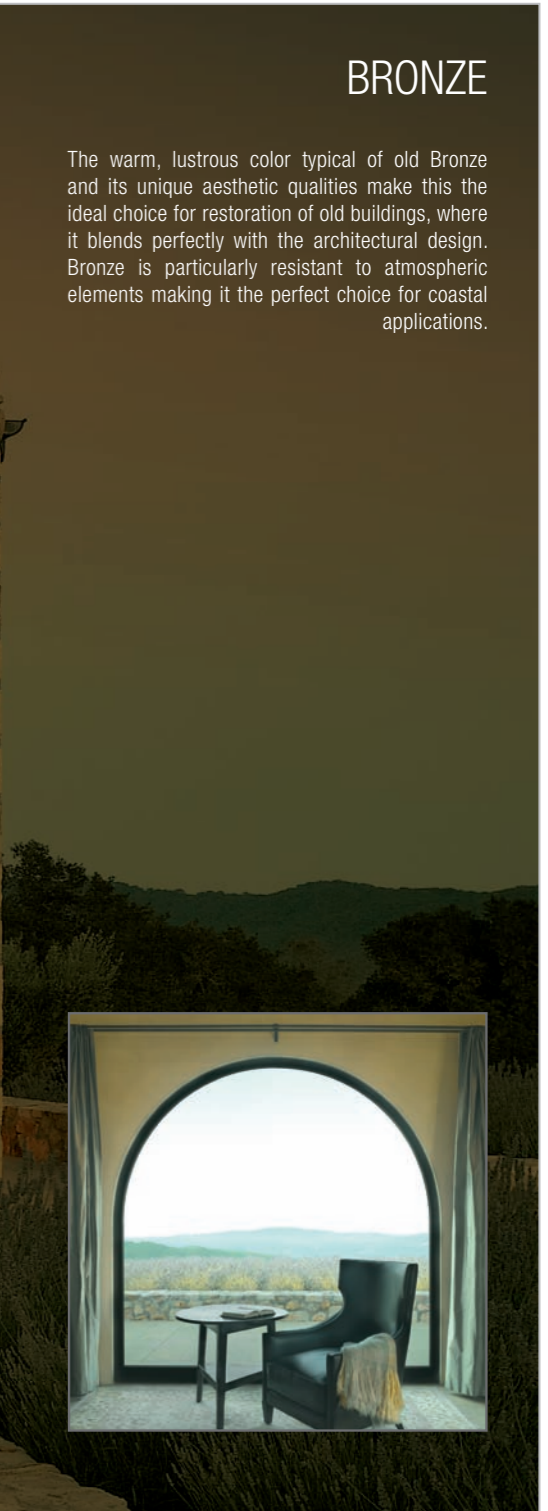

Bronze lends itself perfectly to projects from historic renovations to modern architectural designs. Over time the natural oxidation process creates a patina that will transform to an attractive rich dark brown color creating an almost living and ever changing finish.

Rustic. Refined. Elegant.
COR-TEN

BRONZE

The warm, lustrous color typical of old Bronze and its unique aesthetic qualities make this the ideal choice for restoration of old buildings, where it blends perfectly with the architectural design. Bronze is particularly resistant to atmospheric elements making it the perfect choice for coastal applications.

Warm. Inviting. Alluring.

COR-TEN STEEL

Cor-Ten steel has a unique, distinctive appearance. The intense richness of its finish bestows a warm, natural, yet at the same time extremely elegant look. Its distinctive appearance is a result of an oxidation process which forms a protective patina that remains unchanged over the years.

COR-TEN

Cor-Ten steel is a high tensile strength, corrosion resistant, steel alloy, containing copper, chromium and phosphorus. The name (Cor-Ten) reflects the special properties of this alloy: corrosion resistance (Cor) and high tensile strength (Ten). These properties make Cor-Ten steel particularly suitable for use in any environment.

PAINTED STEEL

Simple and unyielding, powder coated galvanized steel boasts a great tradition and has always played an irreplaceable role in the building trade. Slender steel frames offer a functional and practical solution to the aesthetic requirements of today's most demanding architects and designers.

Expressive. Imaginative. Creative.
