

SKY-FRAME

Sky-Frame's sliding window fronts give your home a Mediterranean feel, even in the North. The frameless, seamless insect screen now gives you a bug-free perspective without affecting the view or the feeling of space.

Frameless and retrofittable
When it is not in use, it is concealed away elegantly in a recess in the frame. Openings of up to a metre can be covered completely. The insect screen can be installed into existing Sky-Frame sliding window systems at any time.

Sky-Frame insect screen

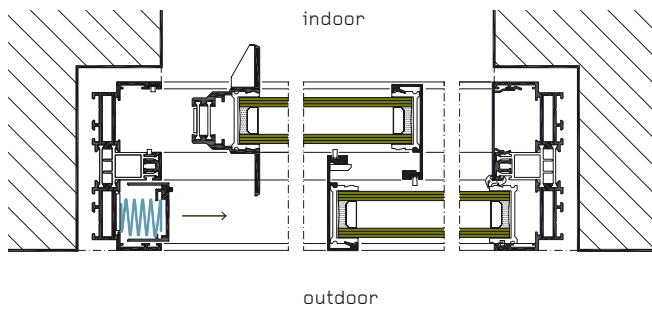

Sky-Frame's insect screen combines breathtaking views with comfortable living. Tension cords made from heavy-duty Vectran and system integration ensure maximum stability and weather resistance.
